Product Features				
Checking Lighting Energy Usage				
Time	0:21	0:22	0:25	0:19
Ease	Easy	Easy	Easy	Very Easy
Satisfaction	High	High	Average	High
Comments	It is easy to understand the feature but invision has bugs to click on the bottom navigation bar.	The title is clear and easy to find the feature. Maybe the appliances energy usage can be shown in different pie charts.	It is smooth to click on the lighting energy usage but as screen is big when user clicks on the lighting part, she couldn't see the bar changes.	The content is clear and the structure is clear.
Observation	User can recognize the feature very fast. The whole process is smooth.	User can easy to get the feature but she didn't expect to see the ratio from the top of bar chart.	It is easy for user to get into the correct page but it is not user friendly when user check the ratio of lighting energy usage.	User can get the feature quickly and very smooth.
Control Lighting				
Time	0:42	0:29	0:22	0:50
Ease	Difficult	Easy	Easy	Difficult
Satisfaction	Average	Average	High	Average
Comments	User doesn't know "mode" can control the lighting.	It is not easy to know the meaning of "mode". Maybe there can be more sentences to explain the feature.	It is easy to get into the control page but the on/off button is like an icon rather than a button.	It is hard to understand "mode" is the way to control the lighting. But after get into the detail page, it is friendly.
Observation	The title should be changed to let user easier to understand the feature.	User spends lots of time to check where she can control the lighting. After she gets into the control page, it is easier.	User can get the feature easily but she misunderstands the power on/off button.	User didn't get the feature name so it takes lots of time for her to find the control page. But after she got into the area page, she can get the feature quickly.

Conclusion

Energy Usage
I will revise the ratio of appliances energy usage expression so it can be more user friendly.

Energy Control
I will rename the title and redesign the on/off button so users can understand the feature clear.
